EXPERIENCE

Nimbus Data Systems | Software Engineer | Boston, MA | Jun 2022 - Present

- Built and shipped REST APIs in Python and FastAPI serving 40M requests per day at p99 latency under 120ms.
- Designed a PostgreSQL schema migration strategy that cut deploy-related downtime from 25 minutes to zero.
- Containerized 12 legacy services with Docker and deployed them to Kubernetes, reducing provisioning from days to minutes.
- Instrumented distributed tracing across the request path, cutting mean incident diagnosis time by 60%.
- Mentored three junior engineers through code review and paired debugging sessions.

Harborline Analytics | Backend Developer | Remote | Jul 2020 - May 2022

- Developed ETL pipelines in Python and Apache Airflow processing 2TB of event data nightly.
- Optimized slow SQL queries with targeted indexing, reducing dashboard load times from 9s to under 1s.
- Added CI pipelines in GitHub Actions with automated testing, raising release confidence and cadence.
- Wrote integration tests that lifted backend coverage from 34% to 81%.

PROJECTS

StreamFold | Real-time aggregation engine

- Implemented a streaming aggregation service in Go handling 500k events per second.
- Used Redis for windowed state with at-least-once delivery guarantees.

PaperTrail | Document search over embeddings

- Built semantic document search using sentence-transformers and FAISS over 100k PDFs.
- Exposed a React front end with sub-200ms query response.

EDUCATION

Northeastern University | M.S. Computer Science | Boston, MA | 2020

Relevant Coursework: Distributed Systems, Machine Learning, Database Design

SKILLS

Languages: Python, Go, SQL, TypeScript, Java

Frameworks: FastAPI, Django, React, Apache Airflow

Infrastructure: Docker, Kubernetes, AWS, PostgreSQL, Redis, GitHub Actions
